

Barrier Support Technology (BST)

Patents Pending

Description - Application

Given the vast number of OLD SCHOOL barriers and barricades in use all over the North American marketplace, obviously the owners and operators utilizing these devices have missed a key ingredient, MARKETING. These barriers and barricades represent your company and your corporate image. What an opportunity! Do you have any idea what it would cost to put your name and logo in front of the public for days or weeks on end? Businesses advertise on bus benches for \$100's of dollars a month because they want to get their name out to the public. Its the same reason you put your name on the side of your trucks. Now here is a perfect opportunity to put your name out there at NO COST, for as long as the work is progressing, and what do you choose, an antiquated piece of near useless equipment that consists of an old 2x4 and a couple of rebar or wooden stands, why?

Take a look at your options A vs. B and imagine a professionally built barrier or barricade that is not only inherently much safer but also much more visible. Just look at the advertising area afforded by option A vs. B. Even if you don't want to put your name on it, at least look the best you can!

Give us a call today and we will show you how our valuable proprietary technology can benefit you, your company and your corporate image.

OLD SCHOOL OPTION A

NEW SCHOOL OPTION B
